RE: Letter of Recommendation

To Whom It May Concern,

Derek Penney Electrical Ltd has been the electrical contractor (and in some cases, general contractor) for a number of projects on which I have been the lead electrical engineer, which have involved the supply and installation of standby electrical generation systems. These projects range from straight forward standby applications to emergency systems for campus wide data infrastructures and regional water supplies. Each project has been a success, due in part to Mr. Penney's attention to the project.

I would certainly recommend Derek Penney Electrical Ltd as a competent and qualified contractor for provision of emergency power generation systems.

Sincerely,
