To whom it may concern,

In 2007 Derek Penney Electrical Limited, general contractor completed the construction of a main communications data facility on the university campus. This project included a relatively complex electrical and mechanical systems upgrade along with the modification to existing and installation of new structural and architectural building components.

Mr. Penney and his team worked well with the design consultants and managed their sub contractors with ease and professionalism. Working closely with the owner's representatives, this company was able to deal with all challenging conditions and performed the work of a high standard, on schedule and within budget.

Mr. Penney's willingness to meet the client's needs and provide quality assurance contributed to the overall success of the project.

I would recommend Derek Penney Electrical Limited, general contractor, on a project of this complexity and nature.

Sincerely

A handwritten signature in black ink, appearing to read "James Hulan".

James Hulan
