

A Division of NSB Group

April 26, 2012

To whom it may concern,

My recent experience working with Mr. Derek Penney on a major data center systems upgrade was extremely positive, he and his team demonstrated the highest degree of professionalism and technical skill.

Derek acted as the general contractor, electrical contractor, and project manager for the installation of a new diesel generator, two parallel redundant 300kVA UPS systems, a new data center power distribution system, and a clean agent fire suppression system for a major government data center. Derek's team solved numerous challenges presented to them in carrying out these projects in a legacy building site. He worked closely with the project engineers, architect, and building owner to ensure that his client received the building solution most suited to their needs.

I look forward to working with Derek again in the near future, and highly recommend him and his team for any project requiring a high attention to detail.

Regards,
